LE TRUNG HAU

Full-Stack developer

Dob: 20/01/2001
Gender: Male
Phone: 036 701 6872
Email: hault.dev@gmail.com
Github: https://github.com/leetrunghaau
Address: Ho Chi Minh City

Experience

EVN HCMC IT Company

Sep 2023 - Dec 2023

Full-stack Intern

- Participated in building an asset management system using .NET technology stack.
- Developed backend services in C# for user authentication and authorization features.
- Built and maintained RESTful API endpoints with ASP.NET Core.
- Worked with SQL Server to write stored procedures and manage data efficiently.

VIETMAP Co., Ltd.

Jul 2024 - Oct 2024

Developer intern

- Developed custom QGIS plugins and utilized Python scripts for advanced geospatial (GIS) data processing and automation.
- Researched and implemented Kart, a Git-based version control system, to enhance the management and versioning of geospatial datasets.
- Contributed to the full data lifecycle, including data collection, cleansing, and processing, ensuring high levels of accuracy and integrity.

Technical Skills

- **Languages:** JavaScript (ES6+), TypeScript
- **Backend:** Node.js, Express.js, RESTful API Design
- **Fontend:** Reactjs, Nextjs
- **Databases:** MySQL, PostgreSQL
- **Tools:** Git, GitHub, Postman
- **Others:** Beyond core backend expertise, also proficient in frontend development (HTML, CSS, React), object-oriented programming (OOP) principles, and C++.

Education

HCMC University of Technology and Education

Major: Information Technology.

Personal Projects

Booking Care

May 2025 - Jun 2025

Role: Backend Developer
Description: The backend for a medical appointment booking system.

- **Key Achievements:** Developed a comprehensive medical appointment system with user, doctor, and appointment management. Implemented specialty/clinic management and file upload features.
- **Technologies:** Node.js, Sequelize, MySQL, Docker.
- **Team Size:** 2
- **GitHub:** https://github.com/leetrunghaau/booking_care_BE

Medly - Medical Chatbot

Jun 2025 - Jun 2025

Role: Developer
Description: An intelligent Vietnamese medical chatbot designed to provide accurate and contextually relevant information to user queries.

- **Key Achievements:** Developed an intelligent Vietnamese medical chatbot (Medly) using Retrieval-Augmented Generation (RAG) for accurate and contextually relevant responses, combining semantic search with large language models.
- **Technologies:** Python, FastAPI, FAISS, SQLite.
- **Team Size:** 2
- **GitHub:** https://github.com/leetrunghaau/Medly
